Drought in rivers and lakes
Verdringingsreeks applies (S2, S3)
1. Safety and irreversible damage
Dikes, subsidence, vulnerable nature
2. Utilities (supply at risk)
Drinking water, then energy supply
3. Small-scale high-value use
Process water, capital-intensive crops
4. Other interests
Agriculture, shipping, industry, nature
Classification of electrolysis
Scenario assumption
As energy supply
Category 2: protected (not used)
As process water
Category 3: partly curtailed → S2 (50%)
As ordinary industry
Category 4: curtailed first → S3 (0%)
Electrolyser capacity, share of the cost-optimal (parameter 1)
100% (S1 base, desalination)
50% (S2, category 3)
0% (S3, category 4)
Verdringingsreeks category
Electrolysis classification
