Electrolyser capacity (1)
100%
no limit: cost-optimal
50%
of S1; rest grey or blue
0%
all grey or blue
Hydrogen demand
feedstock industry, 1.3 Mt/yr, fixed in all scenarios
S1 · BASE
No water scarcity
heavy investment in seawater desalination; outside the verdringingsreeks
S2 · MEDIUM
Medium water scarcity
competition with agriculture; little desalination or recycling; category 3, partly curtailed
S3 · SCARCE
High water scarcity
drought; other sectors prioritized; no desalination; category 4, curtailed first
medium scarcity: at most 50%
Compared with the base (S1)
high scarcity: no electrolysers
Hydrogen demand is met in every scenario; S2 and S3 are compared with the base scenario S1
In each scenario: electrolyser cost or subsidy, CO2 price (2a–b); batteries (3a–c);
green levers (desalinated water, subsidy per kg of hydrogen, mandate)
